

ADDENDUM – AIR CONDITIONING AND AUDIO SYSTEMS

Restricted Operation During Apple CarPlay and Android Auto Telephone Calls

Whilst the Infotainment System is connected to a mobile telephone via Apple CarPlay or Android Auto, certain telephone functions may restrict the display change function.

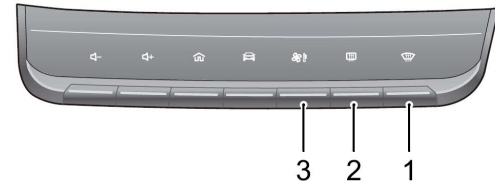

During a telephone call using Apple CarPlay or Android Auto the Infotainment System screen displays details of the call and caller/contact. This screen cannot be changed or exited during the call and therefore restricts access to other functions that are available via the Infotainment System screen.

Air Conditioning and Heater (HVAC) Function Restrictions

During an Apple CarPlay or Android Auto telephone call it is not possible to access the HVAC adjustment function within the Infotainment System. This means that blower speed and temperature settings cannot be accessed or adjusted.

To switch the AC blower on or off during a telephone conversation whilst using Apple CarPlay or Android Auto please hold the AC Control Shortcut key in the Control Panel for 3 seconds, the blower will switch on or off depending on the current working state.

Note: When switching the blower back on, the speed settings will revert to the settings prior to switching off.
